Subject index

abscisic acid 7ff, 41ff, 123, 126, 127, 330ff
– –, content in pea leaves 11
abscisic acid-responsive polypeptide, accumulation 12ff
–, distribution 15
Acanthamoeba kinesin 503
Acanthus mollis 454, 455
Acer 339
– *pseudoplatanus* 458
Acetabularia 324
acetohydroxy acid synthase 1ff
– – –, feedback regulation 3
– – –, inhibition 2, 3
acetolactat synthase, see acetohydroxy acid synthase
acetone cyanohydrin 191, 192, 195ff
acid-β-fructosidase 308ff
acid growth 349ff
– invertase 308
acidification 293, 294, 365ff
–, blue light induced 295ff, 489
–, SO_2-dependent 365, 372
acyl carrier protein 102ff
acetyldigoxin 246 f
adenosine nucleotides 515, 518, 519, 521
Agrobacterium tumefaciens 120, 274ff
Alaria esculenta 491, 492
albino mutants of maize 552ff
aleuron layer 510, 512
alga, green 48ff, 57ff
–, red 137ff
alkalization 64, 65
alkaloid biosynthesis 444
Allium cepa 357ff, 533
Alocasia macrorrhiza 223
Alsonsoa warscewiczii 446, 448, 454, 455
amino-acid concentration 180, 187
– –, subcellular 189
amino-acid sequence of algal α-1,4-glucan lyase 137, 140
– – of tomato, carrot, tobacco 461, 467
amino acids 457ff
ammonia assimilation 129ff
α-amylase induction 402ff
amyloplastic enzyme 342, 343
Anabaena variabilis 66
Anacardium excelsum 411
anaerobiosis 173, 175, 176, 178
Anchusa officinalis 21
anion exchange(r) 34ff
anoxia 402ff
antheraxanthin 371
anthocyan synthesis 238ff
antibodies, monoclonal 532, 533, 537ff
Antirrhinum 467
– *majus* 455
apical-hook opening 214ff
– –, blue-light-stimulated 217ff
– –, red and far-red-ligth-stimulated 217, 218
apoplasmic space 192, 195ff
Arabidopsis 343, 397, 487, 519, 552
– *thaliana* 107, 214ff, 243, 302ff, 358, 360, 400
– –, transgenic 386ff
Arbutus unedo 411
Ascarina scandens 446, 451, 452, 455
Ascophyllum nodosum 491, 492
aspirin 123ff
ATP-dependent Ca^{2+} uptake 377ff
Atropa 443
auxin 235ff, 515ff
Avena 91, 387
– *sativa* 349ff, 402

"band 3"-protein-mediated anion exchange 35
Beta vulagris 444
Betula papyrifera 243
bicarbonate uptake 34ff
biotransformation 246ff
black-shank disease 203
blue light 293ff
– – photoreceptors 214
– – photosensory system 214, 215, 220
– – receptor systems 489ff
Brassica 112, 120
– *campestris* 107
– *napus* 96, 98ff, 107
– *oleracea* 479
Brassicaceae, isoenzymes 95
brown algae 489ff
Bryonia 90, 91, 93
– *dioica* 91
bundle-sheath cells of maize 129ff
– chloroplasts 23ff
butyrate 330, 331, 334, 336ff

C_3 photosynthesis 421ff
– –, model 421ff
C_3-C_4 photosynthesis 508. 513
C_3 plants (cereals) 507ff
C_4 plants, monocotyledonous 23ff, 129ff
Ca^{2+}-ATPase 377ff
– channel 541, 550
calcium transport 377ff
callose synthase 470ff
Calvin cycle enzymes 365, 368, 369, 374
Candida 480
canopy plants 409ff
capric acid 102ff
Capsicum annuum fruit 308ff
carbamylation 222ff
carbon assimilation 365ff
– balance of leaf 409ff
– dioxide assimilation 421, 422, 425ff
– dioxide concentrating mechanism 48ff, 57ff
– dioxide-use efficiency 48ff
–, inorganic 34ff
–, inorganic dissolved 57ff
carbon-reduction cycle 421ff
carbonic anhydrase 48, 49, 57
2-carboxyarabinitol 1-phosphate 222ff
carboxysomes 49, 54
cardenolide biotransformation 246ff
– uptake 247, 249
carotenoid biosynthetic pathway 553, 556, 560
carrier-mediated transport 305, 328
Catasetum viridiflavum 411
Catharanthus roseus 328
cation channel, voltage dependent 541ff
cations, di- and monovalent 541ff
cauliflower mosaic virus 274, 387, 390, 391
Ceiba pentandra 410
cell growth polarity 149ff
cell wall, mycorrhizal resistance 113ff
– –, purification of extensin 457ff
cell wall extension 349ff
cellobiose 474, 475
cells, companion 446ff
–, intermediary 446ff
–, transfer 446ff
cellular organization 246ff
– volumes 181, 184
Cercospora nicotianae 200, 203ff
cereal seeds 402ff
– –, germination 402ff
Cetraria islandica 49ff, 68
channel-mediated mechanism 302, 303, 306
Chara australis 306
Charophyceae 362
Chenopodium album 222ff
Chlamydomonas 23, 65, 561
– *eugametos* 280ff
– *reinhardtii* 30, 52ff, 66ff, 282
Chlorella 54, 55, 422
– *emersonii* 1ff
– *protothecoides* 418
– *saccharophila* 79ff
– *sorokiniana* 79, 83, 84
Chlorophyceae 362
chlorophyll catabolite 417ff
– fluorescence 365, 368, 370
chlorophyll a/b in mesophyll and bundle-sheath cells of maize 131, 132
chlorophyll-porphyrin 417ff
chlorophyll-proteins 265ff
Chlorophyta 362
chloroplast biogenesis 23
– development 265
chloroplasts, senescent 417ff
Cicer arietinum 440
Clusia uvitana 411
Coccomyxa 48ff, 67, 68
coleoptile wall protein 349ff
Coleus blumei 18ff, 448, 451, 454, 455
Collander analysis 41, 42, 44ff
Colletotrichum langenarium 458
Commelina benghalensis 299, 455
– *communis* 299, 384
compartmentation 180
concanavalin-A 166, 168ff
control coefficients 425ff
converter protein 72, 76
Conyza bonariensis 321
cordycepin 404, 405
cortical microtubules 231ff, 357ff
cotyledons of *Hevea* 191ff
– of *Ricinus* 252ff
Craterostigma plantagineum 15
cryofixation 256, 257
Cucumis melo 455
– *sativus* 349ff
Cucurbita maxima 210, 212
– *pepo* 447, 451, 455
Cucurbitaceae 207, 209
Cuphea lanceolata 102ff
– *wrightii* 109
cyanobacterium(a) 48ff, 57ff
cyanogenic glucosides, transport 191ff
– –, uptake 196
cyclooxygenase 124ff
Cymbalaria muralis 446, 452ff
Cynoglossum australe 444
cytokinins, loading and translocation 252ff
cytoskeleton 236, 357

dark germination of *Arabidopsis* 389ff
Datura 5, 443
– *ferox* 391
Daucus carota 166, 458, 461, 532ff
de-etiolation 214, 215, 220
developmental regulation 7ff
diacylglycerol 280ff
diamine oxidase 440ff
Dianthus chinensis 438
Dictyostelinum kinesin 503
Dictyota dichotoma 491, 492
Digitalis cariensis ssp. *trojana* 248
– *dubia* 248
– *grandiflora* 246ff, 446, 451, 452, 455

– *heywoodii* 248, 249
– *lanata* 247ff
– *leucophaea* 248
– *lutea* ssp. *lutea* 248
– *mertonensis* 248
– *parviflora* 248
– *purpurea* 248ff
Digitaria sanguinalis 129
digitoxin 246ff
digoxin 246
dihydrozeatin 252ff
Disctyochloris 54, 55
– *reticulata* 49
disease resistance 200ff
disulfonic stilbenes 35, 38
diurnal rhythm 180, 186
DNA curvature 524ff
DNA/protein interaction 527
Drosophila 530
Dunaliella 54, 280, 362ff
– *parva* 46
– *primolecta* 362ff
– *salina* 362ff
– *tertiolecta* 362

ear bracts of wheat 507ff
Echinochloa crus galli 402
Ectocarpus siliculosus 489, 491ff
eicosanoids 124, 127
electrochemical gradient 305, 306
embryo development of *Sinapis* 95ff
– sac 256ff
embryos of *Daucus*, somatic 532ff
Emilia coccinea 444
endosperm of wheat 342ff
enzyme modulation 178
– purification 308ff, 440ff
enzyme-linked immunosorbent assay (ELISA) 87ff
epidermal cell plasma membrane, permeability 41ff
epiphyte(s) 409, 410
Eremosphaera 330, 362, 363
Escherichia coli 5, 107, 524, 528, 530
ethoxyzolamide 57, 58, 62ff
Euglena gracilis 316ff
Euphorbia characias 440
expansin(s) of cucumber 349ff
– of oat 352ff
expansion of cell wall 349ff
extensin 457ff
– peroxidase 457ff
–, purification 460, 465

fat mobilization 166ff
fatty acids in *Cuphea* seeds 102ff
–, composition 108
–, synthesis 102, 109, 110
Fenton reaction 321
ferredoxin 417, 419
ferredoxin-dependent glutamate synthase 129, 131ff
fertilization 256ff
– signal 280ff
Flaveria trinervia 30
flavin inhibitors 489, 494, 495
fluence-response for induction of germination 388, 391
fluorescence of chlorophyll-a 316, 318, 320
fluorescent compounds 417, 418
flux-control coefficient 342, 346, 347
frog-eye disease 203
fruit of *Capsicum* 308ff
– ripening of tomato 71ff
Fucus serratus 491, 492
Fusarium oxysporum 120

G-proteins 285ff
gene expression of sucrose-synthase 394ff
germination of anise 166ff
– of cereal seeds 402ff
–, effect of anoxia 403, 404
–, photoregulation 386ff
gerontoplasts 417ff
gibberellic acid 149ff, 402ff
gibberellin levels in pea seeds 482ff
– translocation 158ff
Glomus mosseae 112, 114ff
α-1,4-glucan lyase 137ff
–, immunolocalization 140
glucosyltransferase 248
glumes 507ff
glutamin synthase 129ff
glycan 312, 313, 314
Glycine max 223, 515ff
Glycinea 468
glycolaldehyde 57, 61, 64, 67
glycolate dehydrogenase 362ff
– oxidase 362
glycoprotein 166ff, 308, 309, 312, 314
–, hydroxyproline-rich 457ff
glycosides, cardiac 246ff
Gracilaria chilensis 140, 141
– *tenuistipitata* 140, 141
– *verrucosa* 137ff
Gracilariopsis lemaneiformis 137ff
– –, cell structure 140
grain filling 342, 343
– –, temperature effects 342, 343
grains of wheat, immature 507ff
gravicurvature 236
graviresponding roots 231ff
growth response 231
– zone of leaves 433ff
guanosine nucleotides 515, 518, 519, 521
guanosine-triphosphate-binding protein 285ff
guard cell protoplasts 293ff
guard cells of *Allium* 357ff
– –, K^+ channels 330ff

H^+-ATPase 377, 381ff
– pyrophosphatase 377, 381ff
heart insufficiency 246
Hedera 155
Helianthus annuus 421
herbicides 1ff
–, cross resistence 2, 4
Hevea brasiliensis 191ff
Hibiscus 502
high irradiance reactions 390
Hill coefficient 382
Homogyne alpina 41
hook opening in mutants of *Arabidopsis* 214ff
Hordeum vulgare 41ff, 180ff, 243, 324, 402, 417ff
host-pathogen interaction 457, 464, 465, 467
hybridization in-situ 98ff
hydroxyl-radical 316, 317, 319ff
hydroxyprolin-rich glycoprotein 457ff
hydroxypyruvate reductase 362, 363
Hyoscyamus niger 440
Hypogymnia physodes 55, 57ff

IAA biosynthesis 275, 277, 278
– metabolism, compartmentation 274ff
imazapyr 1ff
imidazolinone herbicide 1, 4
indole-3-acetic acid, see IAA
inositol 1,4,5-triphosphate 280ff
intermittent light conditions 265ff
internode elongation 160ff
– growth 159, 163
ionomycin 377, 380
isodityrosine 458, 463, 466, 467
isopentenyl adenine 252ff
– diphosphate uptake 324ff

jasmonate precursors 89, 92
jasmonic acid 86ff, 516, 521
– – biosynthesis 123ff

K^+ channel 541, 542, 549, 550
kernels 507ff
kinematics of leaf growth 433, 437
kinesin 496ff
kinesin-immunoreactive homologue 496ff
knockdown effect 342, 344ff

Lactuca 244
– *sativa* 243
lamin polypeptides 532, 533, 538, 539
Laminaria digitata 489, 491
– *saccharina* 489ff
lanatoside(s) 247ff
Lathyrus sativus 440
leaf growth 433ff
– – inhibition 433ff
leaves, effects of SO_2 365ff
leaves of pea, abscisic acid responsive 10
leghemoglobin 289ff
Lemna gibba 278
Lens culinaris 440
– *esculenta* 440
liana 409
lichens 48ff, 57ff
Lilium longiflorum 471, 478, 479
linamarin 191ff
–, uptake 195
Linaria maroccana 446, 453, 454
Lineweaver-Burke analysis 45
linolenic acid 516, 521
α-linolenic acid 92
Linum 193, 194
–, cyanogenic glucosides 198
– *usitatissimum* 191
linustatin 191ff
–, long-distance transport 197, 198
–, pathway 196ff
–, uptake 194
lipid bilayers, planar 541ff
– bodies 166ff
lipoxygenase 166ff
Lobaria pulmonaria 49, 50
– *scrobiculata* 49, 50, 59, 60
lotaustralin 194
Lupinus 112, 120, 290
Lycopersicon 262
– *esculentum* 71ff, 123ff, 457ff
– *hirsutum* 308
– *peruvianum* 457ff
lypoxygenases 124ff

Manihot esculenta 198
marker proteins 166, 167
mastoparan 285ff
Mediaster 338
Mehler reaction 316, 321
Meloidogyne 120
membrane potential 332, 333, 338, 545ff
Mentha 18
mesophyll, photosystem II 23ff
mesophyll cells of maize 129ff
metabolite concentrations, subcellular 180ff
metabolites in the stroma 424
[^{35}S] methionine labelling 207, 211, 212
methyljasmonate, tritium labeled 86ff
Mg^{2+}/H^+-antiporter 377ff
microtubular cytoskeleton 496, 497, 502
microtubules 413ff, 496ff
–, arrangement 153
–, cortical 149ff, 231ff, 357ff
–, mammalian 499, 500
Mimulus cardinalis 446, 448, 450, 451, 454, 455
monoclonal antibody 86ff
mRNA accumulation of abscisic acid-responsive 12
– of myrosinases 95ff
– secondary structure 289, 290
mutants, herbicide resistance 1ff

mutants of maize 552ff
– of *Pisum* 112ff, 158ff, 482ff
– of tomato fruit 71ff
mycorrhiza resistence 112ff
myrosin cells 95, 98ff
myrosinase genes 95ff

N-methylputrescine oxidase 440ff
NADP-malic enzyme-type C_4 plants 23ff
Nemesia strumosa 446, 448, 450, 454, 455
Nephroma arcticum 49, 50
Neurospora 521
– *crassa* 306
Nicotiana alata 470ff
– *debneyi* 201, 202
– *glutinosa* 201, 202
– *glutinosa* x *debneyi* 200ff
– *rustica* 440, 443
– *sylvestris* 413ff
– *tabacum* 98, 204, 223, 256ff, 440ff, 461, 467, 496ff
– –, transgenic 274ff, 386ff
nigericin 377, 381, 383, 384
nitrate, subcellular distribution 187, 188
nitrate reductase 129, 131, 132
– – in pea 173ff
– –, plasma-membrane-bound 79ff
– – in spinach leaves 173, 175, 177, 178
nitrite reductase 129, 131, 132
nitrogen assimilation 129, 132, 134, 135
Nostoc 48ff, 57ff
nuclear matrix 532, 533, 536ff
– mutations 553, 562
– proteins 532ff
nucleotide sequence of sucrose-synthase 397, 400
nucleotides 515ff
nucleus structure 532ff

okadaic acid 173, 177, 178
oleosin(s) 166ff,
– content in seeds 167
oligomycin 293ff
Oryza 212
– *sativa* 397, 402
oryzalin 413, 415, 416
oxygen species, reactive 316ff

Padina paronica 491, 492
Palicourea guianensis 411
Panicum 134
Parmelia 60
– *saxatilis* 59, 60
pathogenesis-related proteins 7, 8
Paulownia tomentosa 447
pectin 71
Pelargonium zonale 365ff
Peltigera aphthosa 48ff, 68
– *canina* 48ff, 57ff
– *malacea* 49, 50
– *neopolydactyla* 48ff
– *polydactyla* 64, 66
– *rufescens* 60
Pennisetum 23
pericarp tissue of tomato 74, 75, 77
permeability coefficient 44, 45
Peronospora tabacina 204, 205
peroxisomes 362, 363
Petunia hybrida 471, 479
pH, cytoplasmic 330ff
pH-shift 489, 491ff
Phaeophyta 489ff
Phaseolus 394, 400
– *lunatus* 197, 198
– *vulgaris* 164, 222ff, 538
– –, levels of 2-carboxyarabinitol 1-phosphate 225
phenolic contents 201
phenotypic expression 552
phloem loading 252, 254, 255, 446, 447, 454, 455
– protein 207, 209, 210, 212
– sap 252ff
phosphoenolpyruvate carboxylase 507ff
phospholipase A_2 515ff
phospholipids 79, 83ff
phosphorylation, photo- and oxidative 293, 294, 296, 298ff
photobionts of lichens 48ff, 57ff
photoinhibition 316ff
– of germination 386ff
photomorphogenetic mutants 214ff
photoregulation of germination 386ff
photosensory systems 214ff
photosynthesis 34, 36, 37
– of canopy plants 409ff
– inhibition 36, 38, 365ff
– of lichens 48ff, 57ff
–, SO_2 effect 365ff
photosynthetic apparatus 265, 272
– capacity 489ff
– gas-exchange 507ff
– photon flux density 222ff, 410, 411, 421ff
– system of C_3 421ff
photosystem II 265, 267, 269ff, 316ff
–, biogenesis 23ff
physical fixation 257, 261
phytochrome 214ff, 238, 239, 243, 244
– A 386ff
– B 386ff
phytohormones 252
Phytophthora infestans 120
– *megasperma* 468
– *parasitica* var. *nicotianae* 200, 203, 204
pigment to protein ratio 265, 267, 271, 272
Pilayella littoralis 491, 492
Pimpinella anisum 166ff
Pisum sativum 7ff, 41, 112ff, 158ff, 173ff, 285ff, 349, 440, 482ff
– –, dwarf mutant 158ff
plasma membrane, interaction of tubulin 413ff
– –, K^+-transport 302
– –, permeability to abscisic acid 41ff
– – potential 302, 303, 305
plasma membranes of *Chlorella* 79ff
– – of rye roots 541ff
plasmodesmata 446ff
plastid DNA 552ff
– transcripts 552ff
plastids of *Vitis* 324ff
plastome-encoded PSII genes 23ff
Platismatia glauca 59, 60
Plumbago 262
polarity of cell growth 149ff
pollen tube 256ff, 470ff, 496ff
polyadenylation site 289ff
polygalacturonase, β-subunit 71ff
polyphosphoinositide synthesis 280
Polypodium crassifolium 410
Populus 262
potassium channels 330ff
– –, blockers 335
potassium uptake 302ff
Proboscidea 260
propane-jet-freezing 256, 257
protease activation 475, 479
protein(s), abscisic acid-responsive 7ff
– accumulation 7ff
– carrier 324
– of cell wall 349ff
– of the high mobility group 524ff
– late embryogenesis abundant 7, 8
– from nuclei 532ff
– phosphorylation 173, 177, 178
– of sieve-tube exudate 207ff
protein/DNA interaction 527
proteinase inhibitor II 123ff
proton pumping 293ff, 377, 382
– – enzymes 382
protoplasts of epidermal cells 41ff
Prunus amygdalus 458
Pseudocyphellaria amphistica 55
– *billardierii* 55
– *colensoi* 54, 60
– *delisea* 54, 60
– *faveolata* 60
– *knightii* 60
– *lividofusca* 60
– *psilophylla* 55
Pseudomonas solanacearum 204
– *syringae* pvs. *syringae* 200, 203
– – pvs. *tabaci* 200, 203
Psophocarpus tetragonolobus 289ff
purification of enzyme 308ff
pyranine fluorescence 372ff
pyridoxal phosphate 36ff

raffinose oligosaccharide synthesis 446ff
Ramalina maciformis 55, 60, 68
Rauvolfia canescens 86, 93
red light 238ff
red-blood-cell anion-exchange blockers 34
Rhizobium 289
– *meliloti* 121
Rhodochiton atrosanguineum 446, 451, 454, 455
ribulose-1,5-bisphosphate carboxylase/oxygenase (Rubisco) 222ff
–, diurnal regulation 227
–, modulation of activity at dawn and dusk 225, 226
–, modulation of activity by reversible carbamylation 226, 227
Ricinus communis 207ff, 252ff
Rieske protein 560ff
Robinia pseudoacacia 207
root cortex of maize 149ff
– cultures of *Nicotiana* 440ff
– growth of maize 153
roots of maize, gravirespponding 231ff
– of pea 173ff
rosmarinic acid 18ff
– –, biosynthesis 18, 19, 21
rosmarinic acid synthase, purification 18ff
Rubisco 26, 29, 34, 37ff, 48ff, 58ff, 421ff

salicylic acid 124, 125, 127
Salsola kali 120
salt stress 433ff
Saprolegnia 479
Saracha edulis 444
Scenedesmus obliquus 66
scopoletin 200ff
scopolin 200ff
Scrophulariaceae 446ff
–, compounds in lamina 450
–, compounds in leaf blades 449
Secale cereale 402, 541ff
Securinega suffruticosa 444
seed abortion 482ff
– coat of *Vicia* 398ff
– development of pea 7, 9, 10, 15, 482ff
– – of *Vicia* 394ff
seedling development of *Sinapis* 95ff
seedlings of maize 265ff
– of *Ricinus* 207ff
seeds of cereals 402ff
– of *Cuphea* 102ff
sensitivity analysis 421ff
sexual fusion in plants 280, 282
shrinkage of cells 181, 185, 186

sieve-tube exudate 207ff
signal transduction 293, 294, 298ff, 330, 336, 337, 515, 516, 518, 521
Sinapis 390
– *alba* 95ff, 238
– *arvensis* 386
Sorghum bicolor 23ff, 238ff, 433ff
spacer region, external 524ff
sperm cells 256, 262, 263
Spinacia 262
– *oleracea* 46, 107, 365ff
stachyose 446ff
starch content of maize roots 155, 156
starch/glycogen-degrading enzyme 137ff
starch synthase 342ff
– synthesis 342ff, 394ff
statocytes 232
staurosporine 280, 282
stem elongation 158
Sticta cinereoglauca 60
– *fuliginosa* 60
– *latifrons* 60
stoichiometry of chlorophyll-binding proteins 265, 268, 272
stomata opening, light induced 293, 294, 298ff
stomatal guard cells 330ff
storage proteins of *Vicia* 395, 399
stress-induced protein 7ff
striped mutants of maize 552ff
stroma 417, 419, 420
stromal enzymes 369
– metabolite concentrations 424
subcellular volumes 180ff
sucrose, subcellular distribution 188
sucrose-enhanced accumulation of abscisic acid-responsive polypeptide 15
sucrose-synthase gene 394ff
–, sequence 397,400
sulfometuron methyl 1ff
– – resistant mutants 1ff
sulfonylurea herbicide 1, 4
sulfur dioxide 365ff
symbiotic infection processes 112ff
Synechococcus 52ff, 64, 66, 68
Synechocystis 64
synergid degeneration 256ff

temperature, low before irradiation 238ff
temperature effect of starch synthase 342ff
Thielariopsis basicola 204
thylakoid 417, 419, 420
thylakoids in intermittent light grown seedlings 266ff
Tilia 212
tissue-specific protein 7ff
tobacco, transgenic 274ff
tobacco mosaic virus (TMV) 200, 203, 204
tomato fruit, mutant 71ff
– –, normal 71ff
tomato root apex 151, 155, 156
tonoplast membranes 377ff
Trebouxia 49, 54, 55
– *jamesii* 57ff
triacylglycerols 102
triazolopyrimidine sulfonanilide herbicide 1, 4, 5
Trifolium repens 198
– *subterraneum* 440
Triticum aestivum 342ff, 402
– *durum* 507ff
tropical rain forest 409ff
trypsin 36ff, 470, 471, 475ff
tubulin 413ff
γ-tubulin 357ff
tyrosine aminotransferase 18, 21

ultraviolet light-B photoreceptor 238ff
Ulva 34ff
Ulvophyceae 362
Uncarina tomentosa 411
Urtica dioica 254
Usnea filipendula 59, 60

vacuoles, storing glycosides 247, 249, 250
Valerianella locusta 41, 46
vanadate 377, 381, 382, 384
vein anatomy 446ff
Verbascum chaixi 446, 448, 450, 454, 455
Vicia faba 212, 285, 293ff, 330ff, 394ff, 440
– – var. *minor* 397, 400
Vigna radiata 400
Vinca minor 444
violaxanthin 367, 371, 374
Virola surinamensis 411
Vitis vinifera 324ff
Volvox carteri 467

wildfire disease 203
Withania somniferum 444
wound-induced gene expression 123ff
wounded plants 86ff

xanthophylls 371
Xenopus 530
xylem exudate 207, 210ff
– sap 252ff

Zea mays 23ff, 129ff, 149ff, 231ff, 265ff, 278, 285ff, 377ff, 524ff, 533
– –, albino mutants 552ff
zeatin 252ff
zeaxanthin formation 365ff
zygotic selection 486
zymogram patterns of amylase 404, 405
